BACHELORS OF SCIENCE IN INFORMATION TECHNOLOGY

FACULTY OF SCIENCE

END OF SEMESTER FINAL ASSESSMENT

WEB BASED PROGRAMMING

YEAR OF STUDY: III

SEMESTER: TWO

ACADEMIC YEAR: 2026

DATE 7th May 2026

GROUP 6

GIDAGUI MOSES: 2023-B071-21542

NAKAKANDE JENNIFER WS: 2023-B071-22675

PETER KALULE: 2023-B071-20963

NAKANWAGI PAMELA MAUREEN: 2023-B071-20462

QUESTION 2

EVENT MANAGEMENT SYSTEM REPORT

Introduction

The **UniEvents Hub** is a web-based platform developed to revolutionize the way universities in Uganda organize, manage, and promote events. Designed with scalability, security, and user experience in mind, this system addresses the inefficiencies of traditional event management methods by providing a centralized, automated solution. The platform caters to administrators, event organizers, students, faculty members, and external stakeholders, ensuring seamless communication and collaboration throughout the event lifecycle.

Purpose and Objectives

The primary purpose of the **UniEvents Hub** is to empower universities to efficiently plan, execute, and monitor events while enhancing participant engagement and operational transparency.

The key objectives include:

1. Streamlined Event Organization:

- Simplify the process of creating and managing events by offering customizable tools for defining event details such as title, date, time, location, audience capacity, and pricing.
- Enable multimedia integration (e.g., banners, images, and videos) to enhance event visibility and promotion.

2. Enhanced Communication:

- Facilitate real-time interaction between event organizers and students through features like RSVP functionality, notifications, and feedback mechanisms.
- Provide a centralized platform for disseminating event-related information to students, faculty, and external stakeholders.

3. Improved Accessibility:

- Offer a user-friendly interface accessible via desktop and mobile devices, ensuring inclusivity for all users.
- Support multi-language capabilities to cater to a diverse audience.

4. Data-Driven Decision Making:

- Maintain detailed records of events, bookings, and user interactions to support analytics and reporting.
- Generate insights into event performance, attendee engagement, and resource utilization for future planning.

5. Scalability and Flexibility:

- Accommodate a wide range of event types, from small workshops and seminars to large-scale conferences and festivals.
- Ensure the system can scale to meet the growing needs of universities and their stakeholders.

Key Features

UniEvents Hub is equipped with a robust set of features that address the unique requirements of university event management:

1. Event Creation and Management:

- Administrators can create events with detailed descriptions, schedules, and audience capacity limits.
- Integration of multimedia content (e.g., banners, images, and videos) enhances event promotion and visibility.
- Real-time updates ensure that changes to event details are reflected immediately.

2. Venue Booking Module:

- A dedicated module allows users to book venues based on availability, duration, and pricing.
- Automated conflict resolution ensures that no two events are scheduled in the same venue at overlapping times.

3. Dynamic Calendar:

A visually appealing calendar view provides an overview of all upcoming events, enabling users to track and manage events across different dates and times.

- Users can filter events by type, date, or organizer for better organization.

4. User Authentication and Role-Based Access:

- Secure login and password hashing ensure data protection and privacy.
- Role-based access control (e.g., admin@event.com for admin access only, winnie@stud.event.com, pamela@stud.event.com for students access to ensure that users have access only to relevant features and data.

5. Responsive Design:

- The platform is optimized for both desktop and mobile devices, ensuring accessibility for users on the go.
- A clean, intuitive interface enhances user experience and reduces the learning curve.

6. Customizable System Settings:

- Administrators can update system-wide settings, such as the system name, email, contact information, and cover image, to reflect the university's branding.
- Dynamic updates ensure that changes are reflected immediately across the platform.

7. Integration with External Tools:

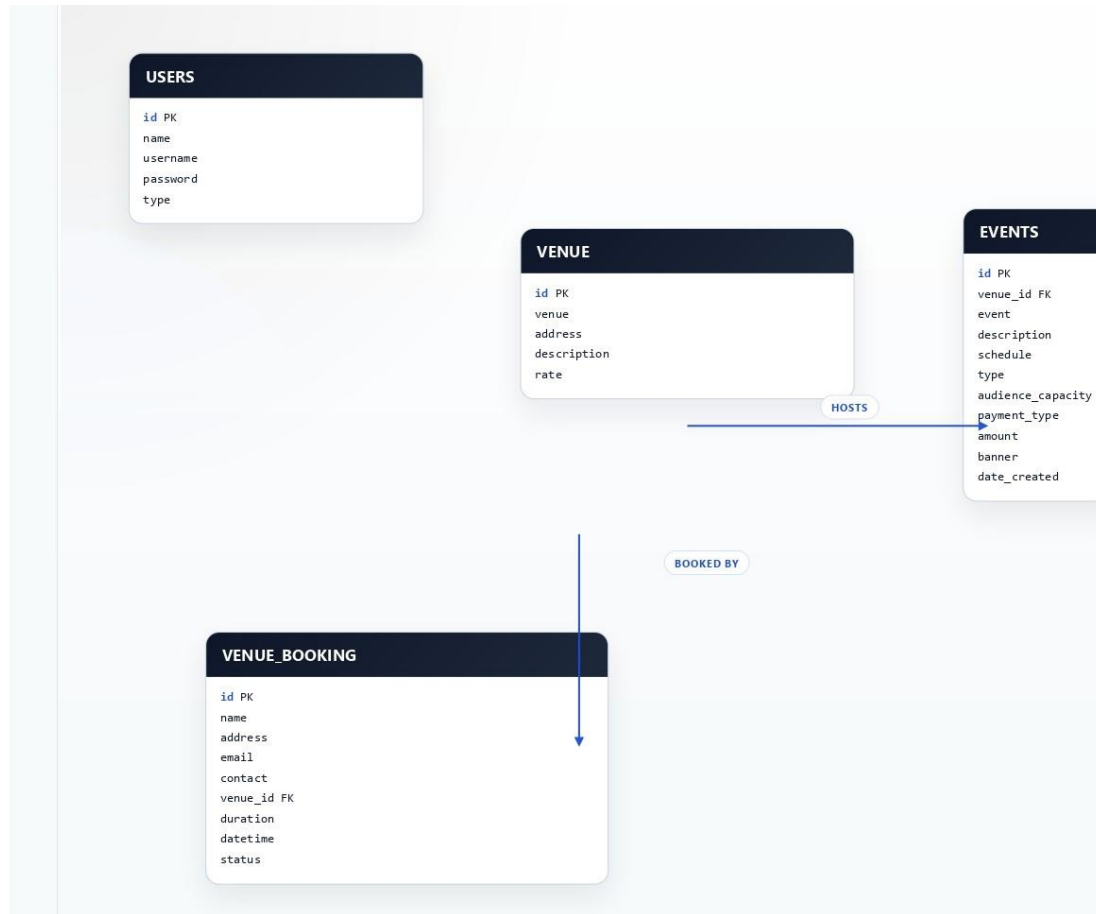

- Future enhancements include integration with payment gateways for ticketed events, social media platforms for event promotion, and email services for notifications.

Technical Specifications

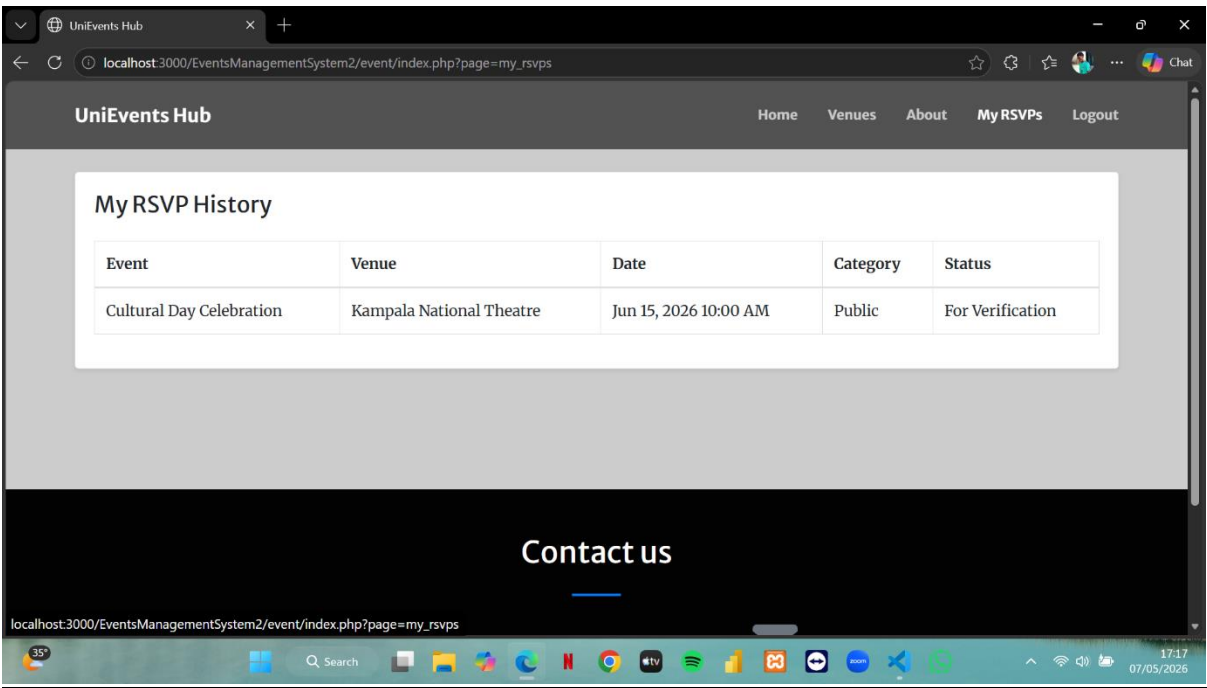

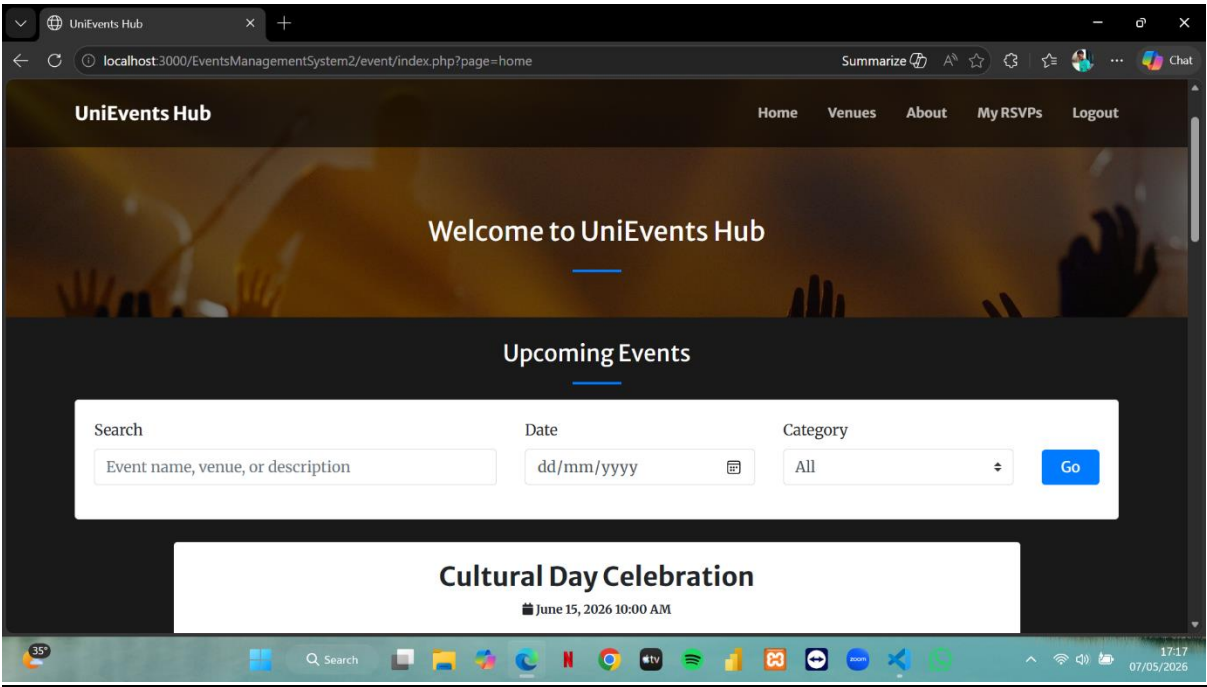

The Event Management System is built using modern technologies to ensure performance, scalability, and security:

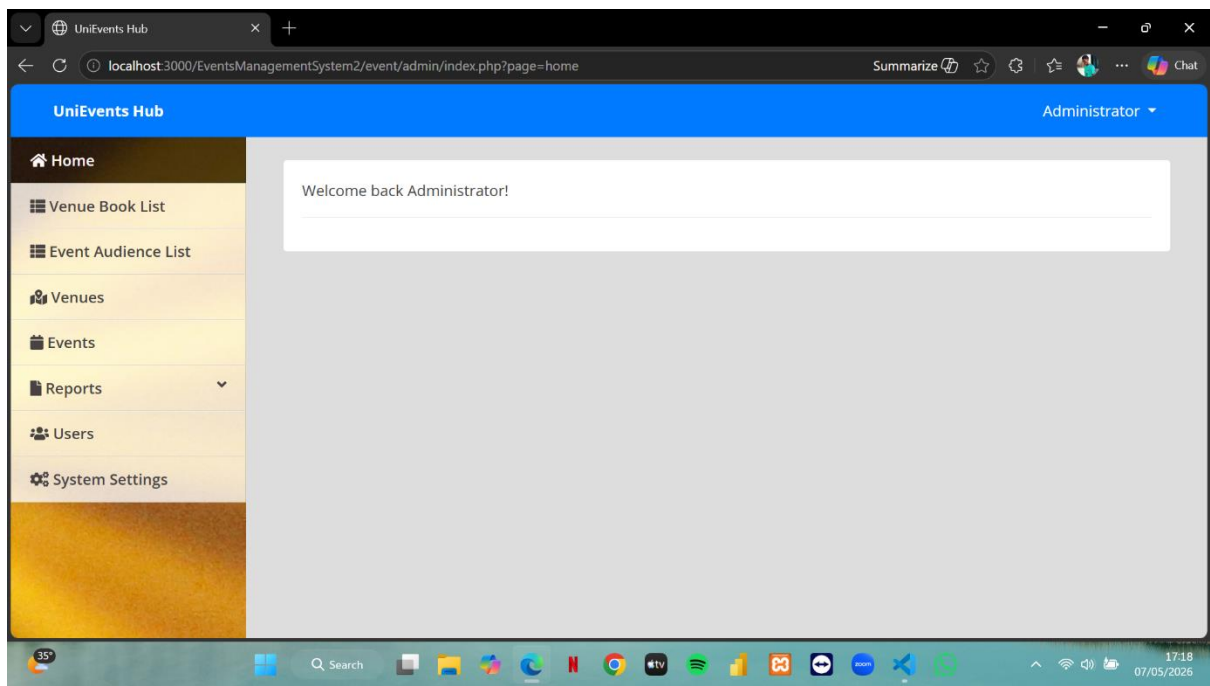

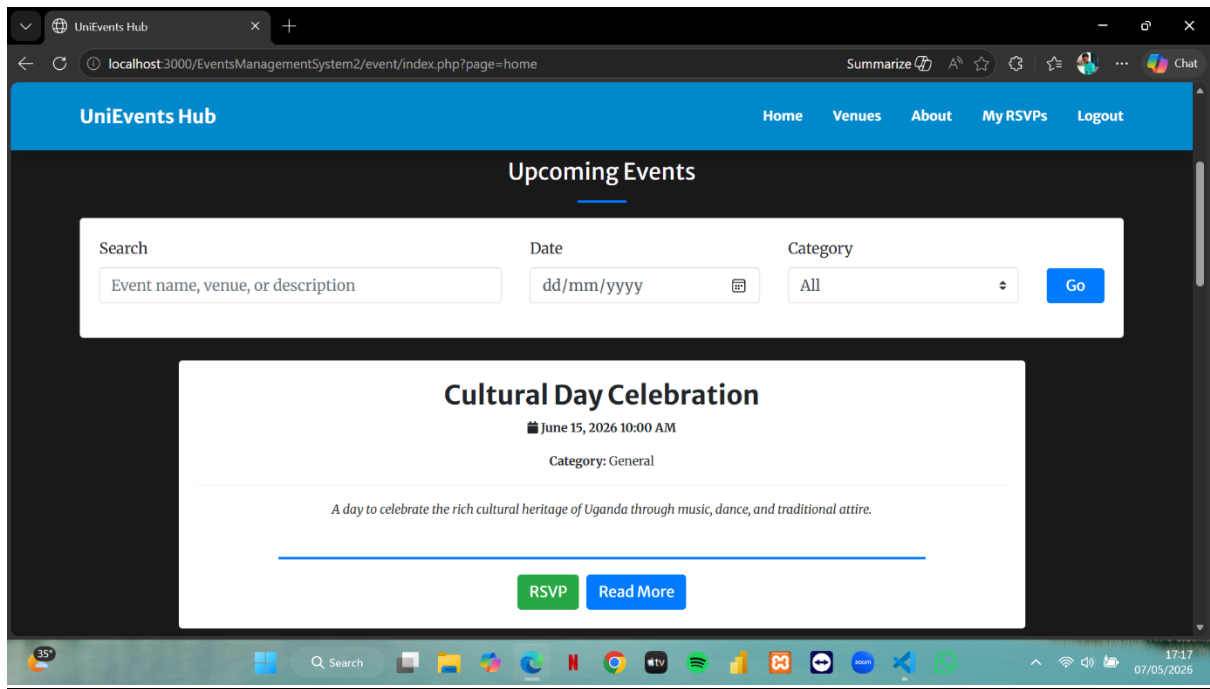

- Frontend: HTML, CSS, JavaScript, jQuery (with frameworks like Bootstrap for responsive design).
- Backend: PHP and MySQL for server-side processing and database management.
- Database: Structured relational database (MySQL) for efficient data storage and retrieval.
